

ANSWER TO YOUR NEEDS CUSTOMIZED IT SOLUTIONS

Software engineers using innovative technologies. Reliable software distributor. Expert in the field of document production and standardization. Creative team of programmers.

Business analysis and creation of system architecture

Our team creates dedicated IT systems. PSNT specialists cooperate with clients at each stage of solution creation. Starting from collecting business requirements, through their analysis and designing the solution architecture, development, testing, ending with implementation and support for the stabilization period.

Creating web applications and websites

We design and implement web applications. In our projects we use the following technologies: HTML5, CSS3, Sass, JavaScript, Typescript, Angular, Bootstrap, ASP.NET MVC, Blazor, which can work in both environments On-premise and in the Cloud.

Creating server and desktop applications

Our team creates server and desktop applications using technologies: .Net 6/7/8 .Net Framework, WCF, WebAPI, WPF, node.js, Docker.

Database support

We specialize in the following technologies: SQL, Entity Framework Core, ADO.NET, SqlServer, PostgreSQL, MySQL, MariaDB, Oracle and others, if necessary.

Conversion of data streams

PSNT team of specialists have many years of experience in implementing solutions based on the conversion of data streams into: PDF; PCL, PS, IPDS, AFP, etc. printer streams; Excel; CSV; database; another stream.

Development team

Our team consists of programmers with many years of experience. Specializing in specific programming languages, but at the same time willing to take on challenges related to learning new technologies or languages. In addition to the general-purpose languages mentioned earlier, our team members also program in dedicated languages tailored to specific solutions, such as the ITP scripting language for creating document templates, or PJL.

Standardization of documents

Our group have been specializing in the standardization of documents for our clients for almost 20 years. Our team will help to properly edit their content and propose an appropriate look. We also offer full documentation of good document creation principles and practices client formatting styles.

Analysis and management of business processes

We help our clients create solutions that automate business processes in their companies. From analyzing the process, through designing it, proposing a specific solution, to project implementation and stabilization support. Also our team provide automate document flow in companies.

Data processing and data management

Our company also specializes in mass data processing using technologies such as python, Powershell, vbScript, JScript, bash, CSV, XML, JSON.
